Overview

CSE-B63 is a board for manufacturers who want to easily and economically embed Ethernet connectivity in their products.

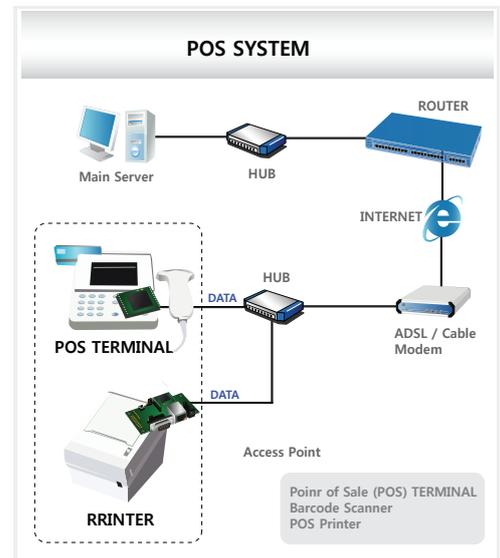

This compact board helps your devices get network connectivity with just serial connection.

Applying this board, not only you can reduce cost and risk, but also you can shorten development time to add the network capability.

Because CSE-B63 allows to extend the distance of your serial communication system, you are able to remotely control and monitor the serial devices over the Internet anywhere you are.

Since CSE-B63 has a D-SUB interface, it is easily applied to RS232 communication environments.
